Sean Wooden helps companies large and small develop strategies to protect their intellectual property and avoid infringing others' intellectual property. He represents clients on deals to acquire rights in intellectual property assets, whether by purchase or license, as well as in intellectual property litigation and prosecution. Often, his assistance includes not just drafting agreements, but helping clients analyze and value intellectual property assets.

Protecting IP assets and creating value

For many of Sean's clients, their intellectual property is a central component of the company's value. Sean advises them on how to best protect that value. Methods may be offensive (suing an infringer, challenging a competitor's patent) or cooperative (signing on new licensees, selling or buying a patent). His familiarity with all possible legal tools allows his clients to choose the best path to meet their commercial goals.

Sean has assisted several clients in identifying lucrative business opportunities involving intellectual property. He has helped clients identify and purchase patent portfolios that later sold for a much higher price. He has found flaws in patents a client was looking to buy, helping the client to negotiate a much lower purchase price than originally contemplated. He has also helped clients find third-party funding to sue infringers or otherwise pursue a monetization campaign, addressing the company's concern that infringement litigation would not be cost-effective. In all these ways, Sean uses his knowledge of intellectual property to expand the legal and business possibilities open to his clients.

Sean also has experience dealing with all types of intellectual property and advising clients on how to implement best-practice policies and procedures that maximize the value and strength of their intellectual property assets.
